The world consists of many complex systems ranging from our own bodies to ecosystems to economic systems Despite their diversity complex systems have many structural and functional features in common that can be effectively simulated using powerful user friendly software As a result virtually anyone can explore the nature of complex systems and their dynamical behavior under a range of assumptions and conditions This ability to model dynamic systems is already having From the reviews This book is a much needed addition to the geospatial modeling literature providing theoretical and practical information hellip this is a valuable contribution to the literature on dynamic spatial modeling in particular and integrat
