3D Face Modeling Analysis and Recognition presents methodologies for analyzing shapes of facial surfaces develops computational tools for analyzing 3D face data and illustrates them using state of the art applications The methodologies chosen are based on efficient representations metrics comparisons and classifications of features that are especially relevant in the context of 3D measurements of human faces These frameworks have a long term utility in From the Back Cover 3D Face Modeling Analysis and Recognition presents methodologies for analyzing shapes of facial surfaces develops computational tools for analyzing 3D face data and illustrates them using state of the art applications The methodol
