This indispensable text introduces the foundations of three dimensional computer vision and describes recent contributions to the field Fully revised and updated this much anticipated new edition reviews a range of triangulation based methods including linear and bundle adjustment based approaches to scene reconstruction and camera calibration stereo vision point cloud segmentation and pose estimation of rigid articulated and flexible objects Also covered are in I do recommend serious consideration of this book for a one semester advanced graduate course on methods for 3D scene reconstruction based on the first five chapters For graduate students pursuing PhDs in the field of computer vision this is a book they w
