By Thomas B. Moeslund : Introduction to Video and Image Processing: Building Real Systems and Applications (Undergraduate Topics in Computer Science) buy introduction to video and image processing building real systems and applications undergraduate topics in computer science read books reviews books introduction to video and image processing building real systems and applications undergraduate topics in computer science Introduction to Video and Image Processing: Building Real Systems and Applications (Undergraduate Topics in Computer Science):

This textbook presents the fundamental concepts and methods for understanding and working with images and video in an unique easy to read style which ensures the material is accessible to a wide audience Exploring more than just the basics of image processing the text provides a specific focus on the practical design and implementation of real systems for processing video data Features includes more than 100 exercises as well as C code snippets of the key algorithm From the Back Cover In order to build successful video processing systems it is important to consider not only traditional image processing methods but also techniques which account for temporal aspects This Introduction to Video and Image Processing
