This book provides a balanced and integrated presentation of modelling and simulation activity for both Discrete Event Dynamic Systems DEDS and Continuous Time Dynamic Systems CYDS The authors establish a clear distinction between the activity of modelling and that of simulation maintaining this distinction throughout The text offers a novel project oriented approach for developing the modelling and simulation methodology providing a solid basis for demonstrating From the reviews An approachable general yet nontrivial introduction to the broad field of modeling and simulation hellip Birta and Arbez have created a well rounded general introduction to a very difficult field to enter The text fills a clear gap in
