Taking inspiration from self awareness in humans this book introduces the new notion of computational self awareness as a fundamental concept for designing and operating computing systems The basic ability of such self aware computing systems is to collect information about their state and progress learning and maintaining models containing knowledge that enables them to reason about their behaviour Self aware computing systems will have the ability to utilise thi From the Back Cover Taking inspiration from self awareness in humans this book introduces the new notion of computational self awareness as a fundamental concept for designing and operating computing systems The basic ability of such self aware computing syst
