This is the only textbook available on multiresolution methods in geometric modeling a central topic in visualization which is of great importance for industrial applications Written in tutorial form the book is introductory in character and includes supporting exercises Other supplementary material and software can be downloaded from the website www.ma.tum.de/primus 2001 From the Back Cover Multiresolution methods in geometric modelling are concerned with the generation representation and manipulation of geometric objects at several levels of detail Applications include fast visualization and rendering as well as coding comp
