Subdivision is a way of representing smooth shapes in a computer A curve or surface both of which contain an infinite number of points is described in terms of two objects One object is a sequence of vertices which we visualise as a polygon for curves or a network of vertices which we visualise by drawing the edges or faces of the network for surfaces The other object is a set of rules for making denser sequences or networks When applied repeatedly From the reviews "The analysis and design of subdivision schemes by Malcolm Sabin provides a practical approach to subdivision curve schemes based on the state of the subject mainly from the years 1972 ndash 2010" The bibliography includes a
