Research To Practice:

We are living in a multilingual world and the diversity in languages which are used to interact with information access systems has generated a wide variety of challenges to be addressed by computer and information scientists. The growing amount of non-English information accessible globally and the increased worldwide exposure of enterprises also necessitates the adaptation of Information Retrieval (IR) methods to new multilingual settings. Peters, Braschler, and Clough's book, "Multilingual Information Retrieval: From Research to Practice," provides a comprehensive overview of the field. In this book, the reader may find a lot of information from the experience of running such large evaluation campaigns. The book's contents comprise six chapters that follow a conference paper structure. I recommend it to all.
