The problem of robotic and virtual interaction with physical objects has been the subject of research for many years in both the robotic manipulation and haptics communities Both communities have focused much attention on human touch based perception and manipulation modelling contact between real or virtual hands and objects or mechanism design However as a whole these problems have not yet been addressed from a unified perspective This edited book is the outc From the Back Cover The problem of robotic and virtual interaction with physical objects has been the subject of research for many years in both the robotic manipulation and haptics communities Both communities have focused much attention on human touch based
