information sciences zhengyou zhang olivier faugeras on 3D Dynamic Scene Analysis: A Stereo Based Approach
(Springer Series in Information Sciences):

he problem of analyzing sequences of images to extract three dimensional T motion and structure has been at the heart
of the research in computer vi shy sion for many years It is very important since its success or failure will determine
whether or not vision can be used as a sensory process in reactive systems The considerable research interest in this
field has been motivated at least by the following two points 1 The redundancy of information contained in time va
