Computational methodologies of signal processing and imaging analysis namely considering 2D and 3D images are commonly used in different applications of the human society For example Computational Vision systems are progressively used for surveillance tasks traf c analysis recognition process inspection p poses human machine interfaces 3D vision and deformation analysis One of the main characteristics of the Computational Vision domain is its int multidiscipl From the Back Cover The present book contains extended versions of papers presented in the international Conference VIPIMAGE 2007 ndash ECCOMAS Thematic Conference on Computational Vision and Medical Image held in Faculdade de Engenharia da Universidade do P
