Neuro robotics is one of the most multidisciplinary fields of the last decades fusing information and knowledge from neuroscience engineering and computer science This book focuses on the results from the strategic alliance between Neuroscience and Robotics that help the scientific community to better understand the brain as well as design robotic devices and algorithms for interfacing humans and robots The first part of the book introduces the idea of neuro robotics Idquo This book describes the state of the art at the interface of neuroscience and robotics It is divided into three sections that can be read independently but as a whole it gives an overview of neurorobotics artificial intelligence and brain plasticit
